Project Status Summary [Change Phase]

Project	Budget	Completion Date	Financial State	Time State
Phase : Develop				
Project Smart	\$50000	31-Jul-2008	On Budget	Delayed
Project Customer	\$35000	30-Sep-2008	On Budget	On Time
Project Communicatio	\$42000	31-Oct-2008	Under Budget	On Time
Project Infrastructure	\$67000	31-Oct-2008	Over Budget	Delayed
Project Innovate	\$98000	30-Nov-2008	On Budget	On Time
Project Expansion	\$73000	30-Jun-2008	Over Budget	On Time
Project Website	\$55000	30-Jun-2008	Under Budget	Delayed
Project Recruit	\$82500	30-Nov-2008	On Budget	On Time
Project Market	\$23200	31-Jan-2009	On Budget	On Time
Grand Total	495700			

Bar chart showing project status distribution across phases: Analyse, Configure, Deploy, Develop, Plan, Propose, Review, Test.

Project Lifecycle Flowchart: Propose → Analyse → Plan → Develop → Review → Configure → Test → Deploy

Most organisations invest in performance improvement projects that have been approved through establishing a 'business case'. However, very few organisations assess projects in terms of strategic alignment, consistently monitor all projects and manage projects as an investment portfolio.

Every business should have clear visibility of discretionary spending – what investments are being made and whether those investments will ultimately drive performance and improve the bottom line.

By monitoring and controlling the delivery of essential programmes and projects, an organisation can more

effectively manage resources, execute a business plan and build the confidence of all stakeholders.

CorProject manages all the activities that are critical to the successful execution of a business plan. It enables organisations to track status, costs, accountabilities, risks, issues, changes, schedules and dependencies for projects and programmes. Through an intuitive user interface, an organisation can link projects and programmes to their strategic objectives and record all relevant quantitative and qualitative data.

KEY BENEFITS

Monitor progress more effectively

Consider related projects and dependencies and quickly see progress towards the achievement of objectives through the use of dashboards

Rapidly respond to issues

Highlight matters that require attention through exception reports and proactively adjust project plans based on current information

Save costs

Save costs from the elimination of non-core projects and non-performing initiatives by identifying 'quick wins' and 'time wasters'

Improve allocation of resources

Focus resources on ROI and strategic objectives

KEY FEATURES

Repository of project-related data

- Record information relating to execution of the strategic program and projects, information which is otherwise not available in reportable systems
- Quantitative data, such as dates and costs
- Qualitative data such as objectives, planned tasks, assessments, issues, risks and changes

Highly scalable

- Cascade from business objectives, programs and projects throughout the organisation
- Unlimited users, objectives, projects, tasks and actions
- Customisable business rules for consolidation of status and performance measures
- Security data and business processes as required

Dashboards & reports

- Consolidated views for projects, programmes and objectives
- Detailed reports of actions planned and actions taken
- Financial and non-financial information
- Cost, time, risk and quality indicators
- Exception reports (e.g. Highlighting non-performance)
- Available online and for printed outputs
- Templates for dashboards, reports and analysis, based on 'best practice' management standards
- Customisation can be readily achieved (without any programming skills)
- Ad-hoc reporting and analysis

WHAT SETS CORPROJECT APART

Integration with related solutions

- Project management systems
- Budgeting and planning systems
- Scorecards and performance measurement systems
- Employee appraisal and incentive systems
- Either CorVu systems or third party systems

Simple user interface

- Exceptional visualisation for dashboards and reports
- Intuitive interface to navigate corporate information
- Consolidated views are available for projects, programmes and business objectives
- Visualisation can be modified to meet customer needs, without any programming skills required

Workflow

- Evaluations, approvals, reminders, alerts and escalations
- Manage a pipeline of potential business initiatives
- Track the progress of projects through phases – from initiation through to evaluation, design, development and finalisation

Flexible business model

- Supports all commonly-used project management methodologies
- Centralised or decentralised management models
- Templates that reflect management 'best practice'
- Terminology can be easily modified to match customer conventions
- The entire business model can be modified to meet customer needs, without any programming skills required
