

# HyperVu

Application web deployment using interactive HTML pages

To meet the needs of busy information consumers, a performance management application must be so simple to use that it is entirely intuitive, even for occasional users.

CorVu's HyperVu module achieves a particularly intuitive user experience with simple-to-understand web pages, which can be linked through familiar underlined 'hyperlinks'. HyperVu's simplicity also makes it a low-cost and highly-scalable solution for timely, enterprise-wide information deployment.

Dashboards, reports, graphics and data entry forms are some of a wide range of objects that can be delivered from a HyperVu user

interface. The obvious advantage is that a wide variety of business solutions – business analysis, scorecards, project portfolios, risk management, human resource management, budgeting or planning – will have a common look and feel and a common navigational method.

**HyperVu also supports single-click transferral of data to MS Excel and MS Word or creation of a PDF for professional quality printing, if required.**

## KEY BENEFITS

### Expand user base with minimal cost

Easily deploy reports, graphs, dashboards, scorecards and other analysis to an expanded user population - for example provide valuable reports and analysis to suppliers, partners and customers in HTML or PDF form

### Improve timeliness of information

Make business information available from one or more enterprise data sources 'on-demand'

### Improve report quality

Intelligent and interactive capabilities, including expand-and-collapse, slice-and-dice and drill-down-to-details or drill-to-related-information are all available through simple hyperlinks

### Minimise costs

Deploy business information on an intranet or the internet using nothing more than a web browser and without any need to train users

## KEY FEATURES

### Interactive HTML

- Publish static HTML web pages as intelligent and interactive web objects
- Embed text, tables, graphics and hyperlinks into static web pages
- Embed hyperlinks in a column of a Quick Report
- Add hyperlinks to page headers/footers and group headers/footers
- Provide hyperlinks for drill-down, giving slice-and-dice capability
- Make related information available as pop-up text, or by expanding rows or columns as required.
- Pre-publish HTML reports via the CorBusiness Scheduler
- No training required for end users

### HTML on-demand

- Provide a static HTML view of any CorBusiness object (reports, graphs, tables, dashboards)
- Generate reports on demand
- HTML generated on-the-fly; no pre-building of HTML pages required
- Immediate ability to change values for prompted constraints
- Reference style sheets to apply corporate style settings to all published reports
- Publish reports in HTML or PDF

## WHAT SETS HYPERVU APART

### High performance

- Server loads and data transfers are minimized
- Pre-processing and/or pre-publishing options exist to optimise the user experience

### Powerful capabilities

- Deliver personalised performance data on-demand in pure HTML or PDF
- Embedded hyperlinks enable intelligent and interactive capabilities, including slice-and-dice and drill down
- Unrivalled scalability that can be deployed in any environment, from small organisations to tens of thousands of users

### Easy to manage

- Easy to deploy and administer
- Web browser access - no additional client software - and no software downloads streamline the deployment and maintenance process
- A seamless upgrade for CorBusiness

### Low total cost of ownership

- Web-based report deployment provides a low total cost of ownership
- Minimises software license cost, as well as cost to implement, distribute and maintain

CorVu, a Rocket software brand
